# CSS TRANSFORM PROPERTY

Transform Properties

The transform property applies a 2D or 3D transformation to an element. This property allows you to rotate, scale, move, skew, etc., elements.

- scale
- skew
- translate
- rotate

Transform Origin

The transform-origin property allows you to change the position of transformed elements.

2D transformations can change the x- and y-axis of an element. 3D transformations can also change the z-axis of an element.

Supported values:

- left
- center
- right
- length
- %
